DCR Consulting

Project Management

The Challenge

With the ongoing digital transformation, increasing market dynamics, and rising technical complexity, successful and efficient management of IT projects is becoming increasingly relevant for business success.

Projects in the IT environment are very complex and demand a lot of experience and expertise to avoid failure. Often, companies do not have sufficient internal resources, expertise, or experience to successfully complete their own projects. This results in a high demand for project management in terms of quality, adherence to deadlines, and costs, mainly caused by:

- a high number of concurrent projects
- high criticality/importance of the projects
- a high number of involved companies, departments, and segments, locations, and employees
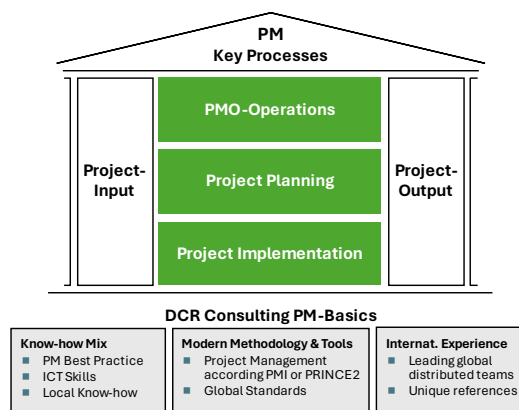

Our Solution

Due to a long track record DCR Consulting possesses comprehensive expertise in project management. Based on globally recognized standards in project and program management, DCR Consulting has developed a project management model.

Through the proven and structured approach, DCR Consulting is your reliable partner in executing global, national, and regional IT projects.

The best-practice approach of DCR Consulting enables robust planning from the beginning and includes the following service components:

- Program/Project Management Office
- Scope & Time Management
- Quality Management
- Risk Management
- Communication Management
- Monitoring & Controlling
- Change Control Management
- Project Closure & Acceptance

PM Key Processes

Project-Input	PMO-Operations	Project-Output
	Project Planning	
	Project Implementation	

DCR Consulting PM-Basics

Know-how Mix	Modern Methodology & Tools	Internat. Experience
■ PM Best Practice ■ ICT Skills ■ Local Know-how	■ Project Management according PMI or PRINCE2 ■ Global Standards	■ Leading global distributed teams ■ Unique references

Our consulting approach

The professional project management of DCR Consulting always keeps the critical success factors of time, cost, and quality in mind.

Key aspects include:

1. Clear definition of goals and requirements:
   Clearly defined goals and requirements form the basis for the entire project process.
2. Effective communication:
   Open and clear communication is crucial for the success of a project.
3. Stakeholder management:
   Effective stakeholder management ensures that the needs and expectations of all involved parties are considered, and conflicts can be avoided or resolved.

Your benefits

Through our methodical and structured approach, you and your involved stakeholders gain clarity about the status and progress of your IT project. The benefits include:

- Consistent point of contact throughout the entire project, from clarifying the assignment to completion
- Increased efficiency through the integration of DCR Consulting best practices based on established PM standards and experiences from similar projects
- Utilization of specific IT management expertise

What we offer

We have extensive expertise in project management of IT infrastructure projects. This includes all essential aspects such as servers, storage, networking (LAN/WAN), virtualization, mainframes, and the management of associated providers. The key assets of DCR Consulting in this regard are experienced staff, a proven approach model, a comprehensive toolset, and deep industry expertise in banking and insurance, automotive and supplier industries, public institutions, telecommunications companies, as well as energy customers.
